

# Stefan Condeescu

## Junior Data Analyst | Python, SQL, Analytics & Machine Learning

Bucharest, Romania | stefan.condeescu@gmail.com | github.com/stefan1condeescu | linkedin.com/in/stefan-condeescu

### PROFESSIONAL SUMMARY

Junior Data Analyst, recent Economic Informatics graduate, and incoming master's student in Database Systems for Business, focused on Python, SQL, data analytics, and machine learning. Built MacroSense using Streamlit, PostgreSQL, pandas, and scikit-learn for tracking, dashboard analytics, and weight prediction, alongside an end-to-end freight analytics project with clustering and regression. Completed a project-based Python internship validating IoT telemetry with SQLite, JSON parsing, timestamp conversion, and rule-based anomaly detection.

### TECHNICAL SKILLS

**Programming:** Java, Python, C++, C, SQL, PL/SQL, SAS, JavaScript

**Data and ML:** pandas, NumPy, scikit-learn, statsmodels, feature engineering, model evaluation, clustering, regression, time series analysis, Streamlit, Plotly

**Databases:** PostgreSQL, Oracle SQL, SQLite, data modeling, constraints, triggers, audit logging

### EXPERIENCE

**Python Developer Intern - SC Digital Software SRL** | Bucharest, Romania | Mar 2025 - May 2025

- Built Python scripts to validate IoT smart-bin volume logs stored in SQLite by parsing JSON payloads, converting hexadecimal timestamps into datetime values, and comparing extracted records against historical database entries.
- Implemented rule-based anomaly detection for parasitic volume readings, including zero values, out-of-range timestamps, extreme values, sudden drops below threshold, and abnormal hour-to-hour variations.
- Generated CSV reports for missing records and suspicious readings, helping turn raw telemetry logs into reviewable data quality outputs.

**Additional experience:** Accounting Intern - 360 Online Accounting SRL (Jul 2025 - Sep 2025), using SAGA and supporting balances, document organization, and archive maintenance.

### PROJECTS

#### MacroSense - Nutrition, activity, analytics, and ML prediction app

Python, Streamlit, PostgreSQL, pandas, scikit-learn, Altair, psycpg2, unittest | <https://github.com/stefan1condeescu/MacroSense>

- Built a Python + Streamlit application for food, activity, and weight tracking with user/admin authentication, custom meals, dashboard analytics, and a read-only What-if simulator.
- Implemented BMI, BMR, estimated TDEE, calorie balance, recommendation cards, and a leakage-aware ML pipeline for 14/30-day weight prediction using pandas and scikit-learn.

#### Global Freight Transport Analytics - Streamlit dashboard for transport data analytics and introductory ML

Python, Streamlit, pandas, NumPy, Plotly, scikit-learn | <https://github.com/stefan1condeescu/global-freight-transport-analytics>

- Created an end-to-end data analytics dashboard for World Bank-style freight indicators, including data reshaping, metadata merging, missing-value handling, and regional aggregation.
- Implemented IQR-based outlier detection, interactive visualizations, K-Means clustering, multiple linear regression, and logistic regression for top-quartile freight classification.

#### Oracle Maritime Transport DBMS - Oracle SQL and PL/SQL relational database project

Oracle SQL, PL/SQL, Data modeling, Triggers, Packages | <https://github.com/stefan1condeescu/oracle-maritime-transport-dbms>

- Modeled a maritime passenger transport database with ships, routes, scheduled route assignments, passengers, tickets, crew members, and crew assignments.
- Implemented constraints, sample data, representative SQL queries, views, indexes, synonyms, PL/SQL procedures/functions, packages, capacity validation triggers, and deleted-ticket audit logging.

### EDUCATION

**Incoming Master's Student - Database Systems for Business (BDSA)**, Faculty of Economic Cybernetics, Statistics and Computer Science, Bucharest University of Economic Studies | Sep 2026 - Jul 2028 (expected)

Program focus: advanced database design, administration, integration, and large-scale data processing

**Bachelor's Degree in Economic Informatics**, Faculty of Economic Cybernetics, Statistics and Computer Science, Bucharest University of Economic Studies | Sep 2023 - Jul 2026

Graduated July 2026; technical focus: software engineering, databases, data analysis, and machine learning

**Relevant coursework:** Object-Oriented Programming in Java, Software Quality and GoF Design Patterns, Databases, Data Structures, Web Technologies, Statistics, Data Analysis, Time Series Analysis, SAS

### CERTIFICATIONS AND LANGUAGES

Certifications: Oracle Academy - Database Design and Programming with SQL (Dec 2024); Oracle Academy - Database Programming with PL/SQL (May 2025); IELTS Academic - Overall Band 8.0

Languages: Romanian - Native; English - Advanced - IELTS 8.0, Cambridge FCE C1
